## Product overview

### Superimposed-pulse ignitors

Series: ZRM ES/C, ZRM ES/CT, ZRM ES/B

- Standard superimposed-pulse ignitors
- Digital superimposed-pulse ignitors with automatic disconnection circuit and pulse-pause ignition
- For the following wattage ranges:
  - HI 35 – 3,500 W
  - HS 35 – 1,000 W

### Pulse ignitors

Series: ZRM 4000, ZRM powerPULSE, ZRM 1000

- Pulse ignitors for tapped chokes
- Parallel pulser for an ignition voltage < 1,000 V
- Digital ZRM powerPULSE system with regulated ignition voltage and pulse-pause ignition

### Ignitors with additional impedance

Series: ZRM A201W, B201W

Kits for upgrading from mercury to sodium vapour lamps:

- Integrated reversible thermal controller
- Premounted connecting cable
- Protection class II compatible
- Integrated digital superimposed-pulse ignitor with automatic disconnection
- Pulse-pause ignition: shorter reignition times, minimum downtime
- Suppression of the cycling effect with 3-start counter
- Automatic reset (< 1 s)

### Power changeover switches

Series: ZRM U6M, ZRM U6L

Energy savings in street lighting:

- Reduction in luminous flux by switching to a lower power level
- Maintenance-free, independent and no-complication control system

# Ignitors and power switches for HID

Ignitors for generating the ignition voltages needed by metal halide lamps and sodium lamps without internal starters use either superimposed-pulse or pulse technology. The innovative range of ignitors from Tridonic includes standard ignitors suitable for all commercially available high-intensity discharge lamps with wattages from 35 to 3,500 W, which require an ignition voltage between 800 and 5,000 V depending on the type of lamp.

The special feature of superimposed-pulse ignitors is that the ignition voltage is generated without placing a high-voltage load on the choke. Superimposed-pulse technology leads to a reproducible ignition response which does not depend on the control gear used and is unaffected by voltage fluctuations.

Pulse ignitors are operated with chokes tailored specifically for them. Integrated shutdown of defective lamps reduces the load on the chokes to a minimum. Restart attempts in pulse-pause mode reduce the load on the chokes still further.

Tridonic ignitors ensure lamps start reliably even if the mains voltage is as low as 198 V (switch-on voltage). The ignitor is switched-off as soon as the lamp starts to prevent damage to the lamp. Because of the high-quality narrow-tolerance components the switch-off voltage reaches the high value of 185 V.

The increase in temperature in the ignitor determines its area of application and is therefore an important criterion. Tridonic ignitors are characterised by minimal self-heating, which in turn gives luminaire designers extra creative freedom.

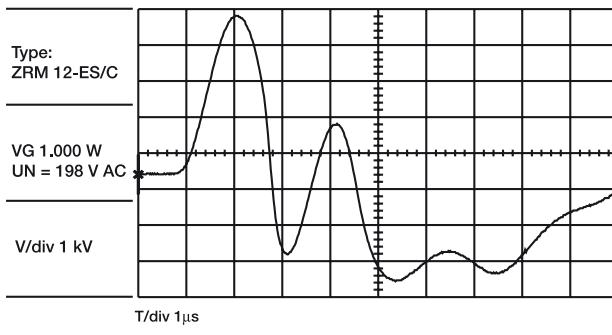

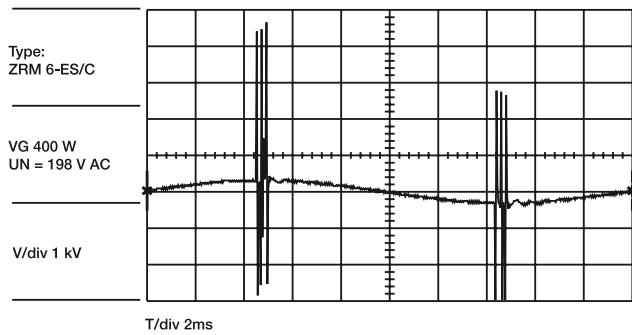

## Superimposed-pulse ignitors

In ignitors that operate on the superimposed principle the ignition voltage is generated by an integrated pulse transformer.

This transforms the mains voltage to the ignition voltage of up to 5 kV required by the lamp.

A cleverly designed circuit is used to control the ignition process. This means that superimposed-pulse ignitors from Tridonic have high system reliability and reproducibility of the ignition pulses, which are largely unaffected by fluctuations in the mains voltage.

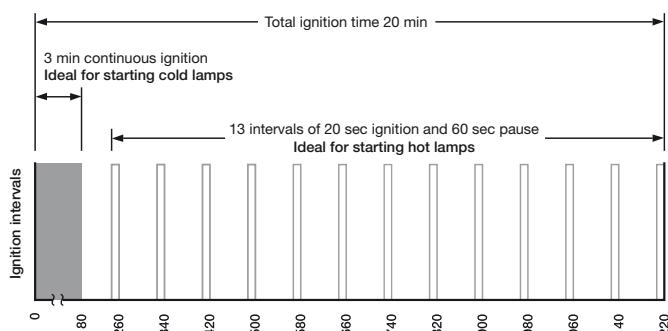

### Superimposed-pulse ignitors with timers

Sodium lamps and metal halide lamps connected to conventional ignitors begin to flicker at the end of their lives. This is avoided by ZRM ES/CT superimposed-pulse ignitors with integrated digital timers and pulse-pause ignition.

The ZRM ES/CT ignitor does not generate ignition pulses constantly but in a patented two-part rhythm, creating the optimum conditions for igniting the lamps.

The lamp has time to cool down in the pauses after ignition. This leads to much faster restarts for hot lamps. Thanks to pulse-pause ignition the system downtime is reduced considerably.

The µ-chip of the integrated timer in the superimposed-pulse ignitor digitally controls the logic for ignition and automatic shutdown. An automatic reset function is also integrated. This reset function is needed for lighting systems that operate 24 hours a day (tunnels, factories).

### Ignitor systems using pulse technology

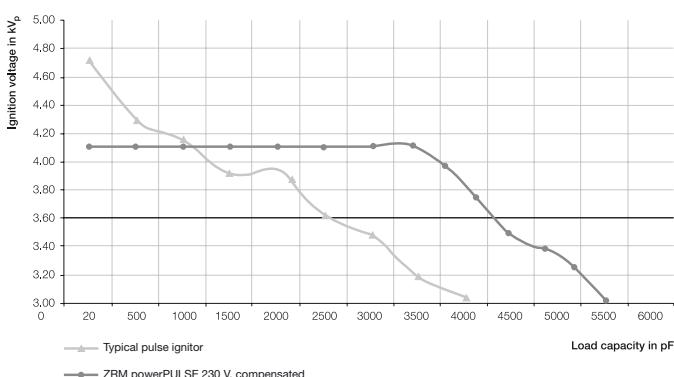

In pulse ignitors the high-voltage pulse is produced in conjunction with the choke. The ignitor uses a separate tap on the choke, specially developed for pulse technology and designed for high ignition voltages.

As the high-voltage pulse is generated in the choke for the ignition process it is possible to achieve very high ignition energy.

The digital ZRM powerPULSE from Tridonic compensates for the dependence of the output voltage on the mains voltage by using a microprocessor in the ignitor to control the production of the ignition pulse. This ensures that the choke and luminaire wiring are not overloaded if there is a mains overvoltage. It also ensures that in the event of a mains undervoltage or if there are extremely long connecting cables the required ignition energy is constantly available.

Comparison of various pulse ignitors

The benefits of pulse/pause technology are evident in the ZRM powerPULSE ignitor as this ignitor reduces the restart time and EMC interference in the ignition phase.

Another feature is the integrated digital three-start counter. This stops the ignition process after three unsuccessful lamp starts to suppress lamp cycling when the lamp comes to the end of its life and avoid overloading the control gear with the high-voltage pulses.

### Power changeover switches

Power changeover switches are used predominantly in street lighting to reduce the lighting level by as much as 50 % at off-peak times and therefore also reduce energy costs by a significant amount.

Tridonic offers power changeover switches for lighting systems with or without a control line. If a control line is present then power changeover switch ZRM U6L is used. This is also available with an integrated timer.

The timer ensures that the lamp is operated for a defined period of time at full output during the start phase. This in turn ensures that the life of the lamp is not reduced unnecessarily.

If there is no control line then power changeover switch ZRM U6M is used. The on and off times can be programmed centrally at any time even after installation has been completed. ZRM U6M is suitable for magnetic chokes with power tapping and also for PCIS outdoor DIM electronic ballasts.

### Supplementary impedances

Supplementary impedances are used to upgrade existing luminaires with inefficient mercury vapour lamps to energy-efficient sodium vapour lamps.

Only one additional component is needed for the upgrade – the supplementary impedance with integrated digital ignitor. Because the existing choke is retained the upgrade is simple and cost-effective.

Supplementary impedances ZRM A001 and ZRM B001 from Tridonic have enhanced insulation and an integrated cut-out in the event of a lamp fault. They are therefore approved for protection class II applications. The supplementary impedances are available in two casing designs and are equipped with 500 mm long connection wires.

### Ignition time bridging

Since high-intensity lamps require a certain starting time to reach their full output an additional lamp can be used to bridge this starting phase. The additional lamp provides sufficient light until the high-intensity lamp has completed the starting phase. The additional lamp is controlled by LRM 500. As soon as the high-intensity lamp produces enough light (about 90 % of full output) the additional lamp is switched-off.

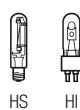

### Standards and approval marks

Ignitors and power switches from Tridonic are ENEC certified, carry the CE mark and meet all the relevant European as well as international standards relating to safety, operation and electro-magnetic compatibility (EMC).

### Technical information and lamp matrix

**ZRM 2-ES/C to ZRM 4.5-ES/C and ZRM 2-ES/CT to ZRM 4.5-ES/CT**

Capacity range 35 – 400 W

**Product description**

ZRM 2-ES/C, ZRM 2.5-ES/C, ZRM 4.5-ES/C

- Standard superimposed ignitor

ZRM 2-ES/CT, ZRM 2.5-ES/CT, ZRM 4.5-ES/CT

- Digital superimposed-pulse ignitors with automatic disconnection circuit
- Pulse/pause ignition: Shorter restart times, minimum downtime
- Suppression of the cycling effect with 3-start counter
- Disconnection of the ignition function after 20 min
- Automatic reset (< 1 s)

**Note**

- ZRM 2-ES/C and ZRM 2-ES/CT only suitable for metal halide lamps and for sodium vapour lamps with an ignition voltage < 2.5 kV<sub>p</sub> only
  - ZRM 2.5-ES/C and ZRM 2.5-ES/CT also suitable for sodium vapour lamp HST-DE 70 W
  - ZRM 4.5-ES/C and ZRM 4.5-ES/CT recommended for outdoor applications
- For product data sheet go to [www.tridonic.com](http://www.tridonic.com), or available on request

at I <sub>b</sub> = 4.60 A (575 W)	2.42 W

**ZRM 12-ES/C, ZRM 12-ES/CT and ZRM 12-ES/C 400**

Capacity range 250 – 2,000 W

**Product description**

ZRM 12-ES/C and ZRM 12-ES/C 400

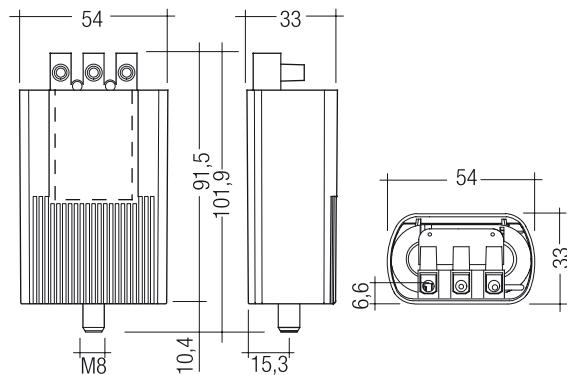

- Standard superimposed ignitor

ZRM 12-ES/CT

- Digital superimposed-pulse ignitors with automatic disconnection circuit
  - Pulse/pause ignition: Shorter restart times, minimum downtime
  - Suppression of the cycling effect with 3-start counter
  - Disconnection of the ignition function after 20 min
  - Automatic reset (< 1 s)
- For product data sheet go to [www.tridonic.com](http://www.tridonic.com), or available on request

**Technical data**

Max. casing temperature	105 °C
Min. ambient temperature	-30 °C
Screw terminal	2.5 – 6 mm <sup>2</sup>

**Ignitor matrix**, page 7**Standards**, page 8**Wiring diagrams and installation examples**, page 29**Ordering data**

### ZRM 20-ES/B and ZRM 20-ES/B 400

Capacity range 1,000 – 3,500 W

#### Product description

- Standard superimposed ignitor
- For high wattages with very low self heating

#### Note

- ZRM 20-ES/B 400 not suitable for high-pressure sodium lamps
- For product data sheet go to [www.tridonic.com](http://www.tridonic.com),  
or available on request

#### Technical data

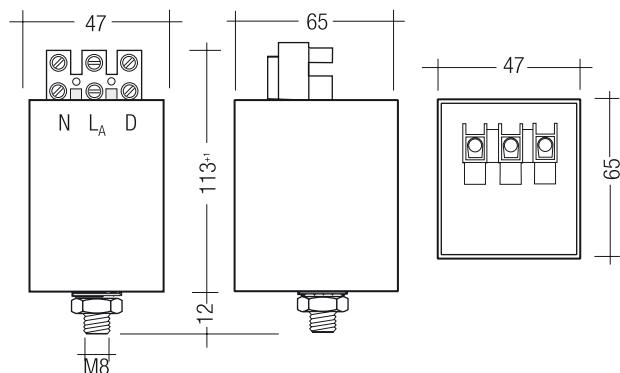

Max. casing temperature	105 °C
Min. ambient temperature	-30 °C
Screw terminal	2.5 – 10 mm <sup>2</sup>

**Ignitor matrix**, page 7

**Standards**, page 8

**Wiring diagrams and installation examples**, page 29

#### Ordering data

#### Self-heating:

<b>ZRM 20-ES/B</b>	
at I <sub>b</sub> = 10.30 A (1,000 W)	9.5 K
at I <sub>b</sub> = 16.20 A (2,000 W)	26.0 K
<b>ZRM 20-ES/B 400</b>	
at I <sub>b</sub> = 16.20 A (2,000 W)	10.5 K
at I <sub>b</sub> = 18.00 A (3,500 W)	28.0 K

#### Losses:

<b>ZRM 20-ES/B</b>	
at I <sub>b</sub> = 10.30 A (1,000 W)	1.8 W
at I <sub>b</sub> = 16.20 A (2,000 W)	5.9 W
<b>ZRM 20-ES/B 400</b>	
at I <sub>b</sub> = 16.20 A (2,000 W)	2.9 W
at I <sub>b</sub> = 18.00 A (3,500 W)	9.3 W

**ZRM 4000 and 4000/400 powerPULSE**

Digital

**Product description**

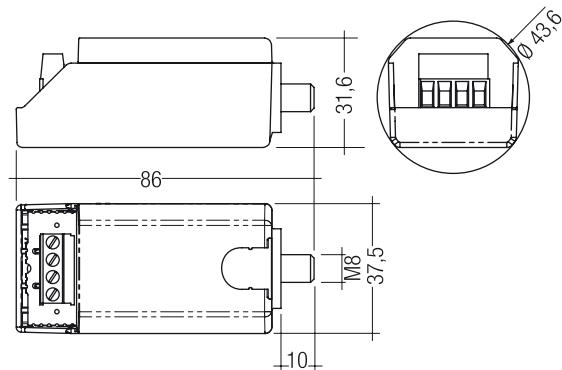

- Innovative digital pulse ignitor
- Pulse/pause ignition: Shorter restart times, minimum downtime
- No annoying flashing
- Silent operation
- Low weight
- Regulated maximum ignition voltage and therefore enhanced safety for the choke
- Also suitable for special sodium vapour lamps (Plus, Super, XL)
- Screw terminals for  $2.5 \text{ mm}^2$

**Note**

- ZRM 4000 powerPULSE only suitable for metal halide lamps with an ignition voltage  $> 2.5 \text{ kV}_p$
- For product data sheet go to [www.tridonic.com](http://www.tridonic.com), or available on request

**Technical data**

Number of pulses per mains half-wave	1
Pulse width at 90% ignition voltage	$> 10 \mu\text{s}$
Phase angle of the ignition pulse	72 / 252 °el
Min. cable length to lamp	0.2 m
Max. casing temperature	85 °C
Min. ambient temperature	-30 °C
Screw terminal	0.5 – 2.5 $\text{mm}^2$

**Ordering data**

Type	Article number	Packaging, carton	Packaging, pallet	Weight per pcs.
ZRM 4000 powerPULSE	86458458	50 pieces	1,200 pieces	0.052 kg

**Specific technical data**

Type	Article number	Permitted input voltage	Mains frequency	Ignition voltage	Losses at nominal voltage	Lamp wattage		Permitted load capacitance	Max. cable length to lamp
						Sodium vapour lamps	Metal halide lamps		
ZRM 4000 powerPULSE	86458458	198 – 264 V	50 / 60 Hz	4.1 $\text{kV}_p$	0.9 W	70 – 1,000 W	35 – 1,800 W	20 – 4,000 pF	40 m
ZRM 4000/400 powerPULSE	86458459	342 – 484 V	50 / 60 Hz	4.1 $\text{kV}_p$	1.5 W	600 – 750 W	1,800 – 2,000 W	20 – 4,000 pF	40 m

**ZRM 2300 and ZRM 4000**

Standard with timer

**Product description**

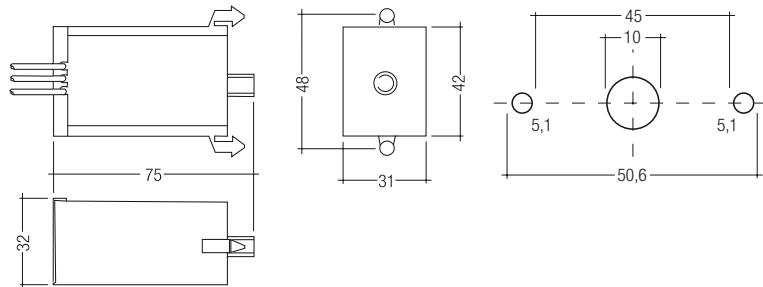

- Snap-in lugs
- Type of protection IP20
- Connection via flexible wires 3 x 0.75 mm<sup>2</sup>
- Cable length 340 mm
- Pulse/pause ignition: (ZRM 2300 C201 and ZRM 4000 C201): pulse: 16 s; pause: 112 s; time-out: 15 min

**Note**

- ZRM 2300 C201 and ZRM 4000 C201 with digital timer: disconnection of the ignition function after 15 min
- ZRM 4000 B101 with analogue timer: disconnection of the ignition function after 2 – 10 min, not ENEC certified
- For product data sheet go to [www.tridonic.com](http://www.tridonic.com), or available on request

**Technical data**

Number of pulses per mains half-wave	1
Pulse width at 90% ignition voltage	> 2 µs
Phase angle of the ignition pulse	60 – 90 °el / 240 – 270 °el
Cable length to lamp	see data sheet
Max. casing temperature	80 °C
Min. ambient temperature	-40 °C

**Ordering data**

**ZRM U6L / ZRM U6L-T**

Energy savings in street lighting

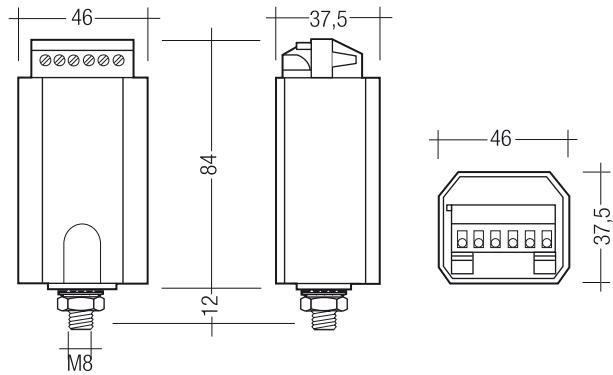

**Product description**

Switching to a lower power stage reduces the luminous flux. This enables energy savings to be made without affecting the life of the lamp. According to lamp manufacturers, lamps should always be started at 100 % output. In the case of ZRM U6L, this can be achieved with a separate time relay at the central signal transmitter. ZRM U6L/T has a built-in delay. After every interruption in the power supply the lamp is operated at 100 % output for a period of 330 seconds irrespective of the light value selected.

- For product data sheet go to [www.tridonic.com](http://www.tridonic.com), or available on request
- The "Energy saving in street lighting" brochure is available at [www.tridonic.com](http://www.tridonic.com) or on request

**Technical data**

**ZRM U6M**

Energy savings in street lighting

**Product description**

The ZRM U6M digital power changeover switch automatically reduces brightness during the night. Changeover is automatically handled by a digital chip. The changeover times can be set centrally via the normal power supply. ZRM U6M therefore operates entirely independently, is maintenance-free and does not require a control line.

- It can be used in any lighting system without an additional control line
- For changing impedance with tapped chokes or supplementary impedances
- Digital switchover relay with temporary bridging for interruption-free power reduction
- Integrated delay circuit for gentle lamp starting at the 100 % output
- ZRM U6M A001 for magnetic chokes with integrated temporary bridging
- ZRM U6M A003 for electronic ballasts with control input
  - For product data sheet go to [www.tridonic.com](http://www.tridonic.com), or available on request
  - The "Energy saving in street lighting" brochure is available at [www.tridonic.com](http://www.tridonic.com) or on request

**LRM 500 S**

Ignition time bridging

**Product description**

Since high-intensity lamps require a certain starting time to reach their full output an additional lamp can be used to bridge this starting phase. The additional lamp provides sufficient light until the high-intensity lamp has completed the starting phase. The additional lamp is controlled by LRM 500 S. As soon as the high-intensity lamp produces enough light (about 90 % of full output) the additional lamp is switched-off.

or available on request

**Technical data**

Max. casing temperature	90 °C
Min. ambient temperature	-30 °C
Screw terminal	0.75 – 2.5 mm <sup>2</sup>

**Wiring diagrams and installation examples**, page 29

**Ordering data**

Type	Article number	Packaging, carton	Packaging, pallet	Weight per pcs.
LRM 500 S	87500041	50 pieces	1,400 pieces	0.15 kg

**Specific technical data**

Type	Article number	Permitted input voltage	Mains frequency	Temperature rise	Max. HID lamp wattage	Auxiliary lamp wattage	Max. choke voltage
LRM 500 S	87500041	198 – 264 V	50 / 60 Hz	12 K	1,000 W	5 – 500 W	800 V

RoHS

**ZRM ES/C terminal cover**

Mounting components

**Product description**

- Contact protection
- No tools required for installation
- Can be mounted even after the cables have been fitted
- Suitable for:

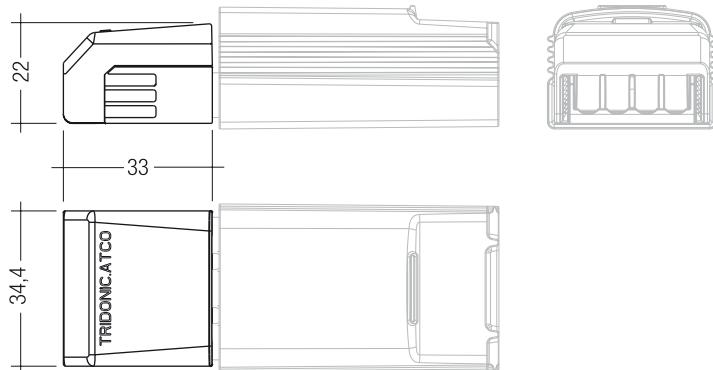

ZRM 2-ES/C; ZRM 2 ES/CT

ZRM 2.5-ES/C; ZRM 2.5-ES/CT

ZRM 4.5-ES/C; ZRM 4.5-ES/CT

ZRM 6-ES/C; ZRM 6-ES/CT; ZRM 6-ES/C 400; ZRM 6-ES/C 3.5 kV

ZRM 12-ES/C; ZRM 12-ES/CT; ZRM 12-ES/C 400

**Technical data**

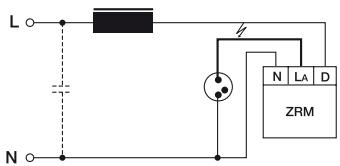

Dimensions L x W x H

33 x 34.4 x 22 mm

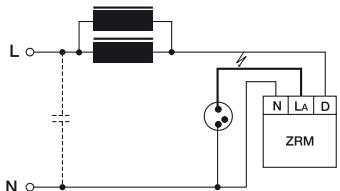

**Ordering data**

Type	Article number	Packaging, carton	Packaging, pallet	Weight per pcs.
ZRM ES/C Terminal cover	24139100	350 pieces	2,800 pieces	0.01 kg

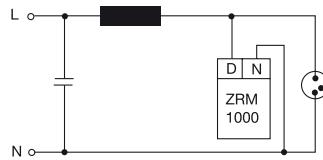

Single-voltage circuit with superimposed-pulse ignitor  
for sodium vapour lamps and metal halide lamps

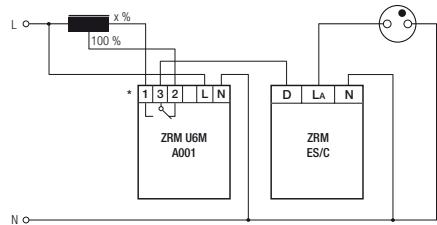

Single-voltage circuit for ECIS 150 ½ with superimposed-pulse ignitor  
for sodium vapour lamps and metal halide lamps

Parallel pulse circuit for metal halide lamps  
up to 1 kV<sub>p</sub> ignition voltage

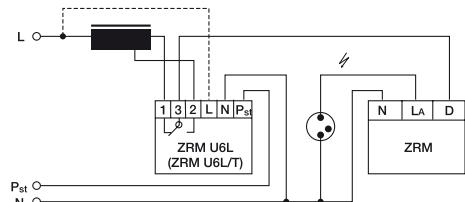

Power changeover for sodium vapour lamps  
by means of tapped choke and ZRM U6M

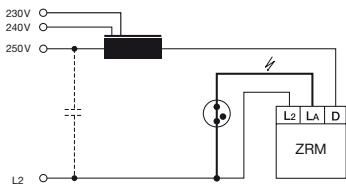

\* standby operation: pin 1 and 2 are connected  
100 % operation: pin 2 and 3 are connected

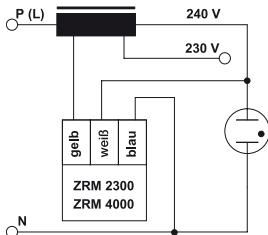

Power changeover for sodium vapour lamps  
by means of tapped choke and ZRM U6L

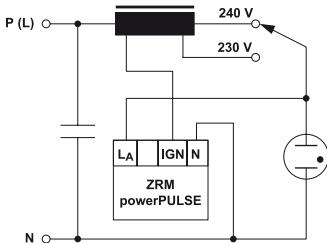

Multi-voltage circuit with superimposed-pulse ignitor  
for sodium vapour lamps and metal halide lamps

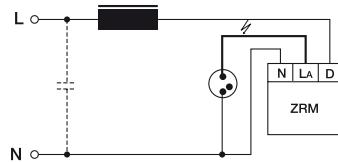

Multi-voltage circuit with pulse ignitors  
ZRM 2300 and ZRM 4000

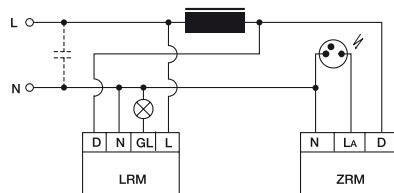

Multi-voltage circuit with pulse ignitors ZRM 4000 powerPULSE  
for sodium vapour lamps and metal halide lamps

Upgrading from mercury vapour lamps to sodium vapour lamps  
by means of supplementary impedance

Ignition time bridging of metal halide lamps  
by means of LRM 500 S
